

Rita Kiwan

Backend Developer

Phone: +963947035201 | **Email:** ritakewan2002@gmail.com

Address: Sweda, sahwat al khoudor, Syria | **GitHub:** <https://github.com/RitaKiwan>

Professional Summary

Detail-oriented and motivated Backend Developer with a strong foundation in building robust and efficient software solutions. Proficient in Python and the .NET ecosystem (C#, ASP.NET), with hands-on experience in algorithm design, data processing, and full-stack web development. Demonstrated ability to leverage frameworks like Django and Flask to create RESTful APIs, and expertise in working with both SQL (SQL Server) and NoSQL (MongoDB) databases. Possesses a keen interest in solving complex problems, optimizing data workflows, and delivering scalable backend systems.

Professional Experience and Projects

Backend Developer | Project-Based & Academic Work

Key Projects:

MTN Corporate Website (ASP.NET, C#, SQL Server)

Developed a dynamic, full-featured corporate website simulating a major telecommunications provider.

Engineered the SQL Server database schema and implemented CRUD operations using ASP.NET and C# for seamless content management.

Built a secure admin dashboard for content management and interactive customer forms to enhance digital presence and user engagement.

IT Assistant Platform (Laravel)

Built two interconnected web platforms for SVU IT students and freelance project collaboration:

Student Portal: Enabled course reviews, resource sharing, article browsing, SVU news updates, and a Q&A forum.

Freelance Hub: Developed a bidding system for student groups to collaborate on client projects, featuring:

Role-based access (students, supervisors, clients).

Real-time notifications, chat system, and automated warnings for project deadlines.

Payment distribution module with transaction tracking.

Tech Stack: Laravel MVC, Eloquent ORM, REST APIs, MySQL, WebSocket (for notifications/chat).

Scientist Payroll Management System (Python, Pandas, NumPy, Matplotlib)

Tech Stack: ASP.NET Core, Vertica SQL, ADO.NET, SQL Server, JWT, REST API.

Designed and built an automated data processing and analytics system for complex payroll calculations.

Utilized Pandas and NumPy for efficient data manipulation, automatic calculation of entitlements, deductions, and taxes.

Developed clear, insightful financial dashboards and visualizations using Matplotlib to support strategic decision-making.

Complaint & Order Management System (Python, MongoDB)

Created a flexible Workflow Management System for a humanitarian organization using MongoDB for unstructured data storage.

Developed a Python backend (Flask/Django) to handle API logic for user registration, ticket creation, and status tracking.

Streamlined operational workflows, significantly improving issue resolution times and service delivery efficiency.

8-Puzzle Solver Engine (Python)

Implemented an advanced search engine for the classic 8-Puzzle game using the A* algorithm.

Integrated and compared multiple heuristic functions (Manhattan Distance, Misplaced Tiles) to find the optimal solution path efficiently.

Built an interactive interface to simulate the game and visualize the algorithm's problem-solving steps.

Technical Skills

Backend Development:

Python, C#, ASP.NET, Object-Oriented Programming (OOP), Algorithm Design (A*)

Python Libraries & Frameworks:

Pandas, NumPy, Matplotlib, Django, Flask

Databases:

SQL Server, MongoDB

Tools:

Git, VS Code, Postman, PHPUnit, Android

Studio

Frontend & Other:

HTML, CSS, Basic UI/UX Design Principles

Education

B.Sc. Information Technology Engineering | Syrian Virtual University | Mar 2021 – Dec 2025 (Expected)
